Summary

Computer Science undergraduate interested in software engineering, distributed systems, cybersecurity, cloud technologies, and AI-driven systems. Experienced in backend-focused projects and research-oriented internships involving Android security and machine learning workflows. Passionate about building scalable and practical technology solutions through applied engineering and research.

Education

JK Lakshmipat University, Jaipur 2024 – 2028
Bachelor of Technology in Computer Science and Engineering

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, OOP, Machine Learning

Ryan International School 2024
Senior Secondary Education

Technical Skills

Languages: C, C++, Python, JavaScript
Core Concepts: Data Structures & Algorithms, DBMS, Operating Systems, OOP, Machine Learning
Libraries & Frameworks: Scikit-learn, Pandas, NumPy, Express.js
Tools & Platforms: Git, GitHub, Linux, VS Code
Databases: MySQL, MongoDB
Exploring: Cloud Computing, Backend Development, Cybersecurity, AI/ML Systems

Projects

Aves Migration Prediction System | ***Python, Scikit-learn, Pandas, Machine Learning*** April 2026

- Developed a machine learning-based wildlife telemetry analysis system to predict bird migration success using GPS tracking data
- Processed and analyzed telemetry datasets containing 4.8 million+ GPS records and 48 sensor features
- Performed GPS cleaning, feature engineering, class balancing, and bias correction for imbalanced datasets
- Implemented and evaluated Logistic Regression, SVM, KNN, Decision Tree, Random Forest, and XGBoost models
- Achieved highest F1-score of 0.972 using Random Forest after cross-validation and dataset bias correction
- GitHub: github.com/justsamridhi/Aves_Migration_System

SkillSwap Platform | ***Node.js, Express.js, MongoDB*** 2025

- Designed and implemented RESTful backend APIs for a peer-to-peer skill-sharing platform
- Integrated MongoDB for structured user and skill data management
- Focused on scalable backend architecture and efficient database handling

Event Management System | ***Python, MySQL*** 2025

- Built backend logic for event scheduling, user registration, and event management workflows
- Implemented structured database operations and optimized data handling processes
- Improved organization and management of event records and user interactions

Experience

Cybersecurity Research Intern – MNIT Jaipur 2026 – Present
Android Security & Malware Analysis Research

- Studying Android Open Source Project (AOSP) architecture and Android source tree structure
- Exploring Android malware analysis using MobSF, APKTool, JADX, and Frida
- Working with static and dynamic analysis techniques to identify vulnerabilities and analyze mobile application behavior
- Creating technical documentation and visual workflows for Android security concepts

AI/ML Research Intern – LNMIIT 2026 – Present
Audio Deepfake Detection Research Project

- Working on comparative analysis of existing audio deepfake detection techniques and methodologies
- Preprocessing and balancing datasets for training binary classification models
- Exploring machine learning workflows for detecting manipulated and synthetic audio samples
- Assisting in experimentation, model evaluation, and technical research documentation

Leadership & Activities

Art Club Co-Chair – JKLU 2024 – 2025

- Led planning and execution of creative events and activities for 500+ students
- Managed coordination, logistics, and promotional activities

Cohort Leader – Aarambh'25 2025

- Guided students during onboarding and transition activities
- Acted as a communication bridge between students and university administration

Social Media Volunteer – HackJKLU 4.0 2025

- Managed outreach and promotional campaigns for the university hackathon

Certifications

- Red Hat System Administration I (RH124) – Red Hat
- Database Management System (Part 1) – Infosys Springboard
- Drone Engineering Workshop – JKLU
